If you enjoy using our app, give us a review of every update! I've been looking for a radio app that will set up stations from all over the world. And not just music stations, but also news and radio talk. After a lot of frustration, after downloading and testing several applications, I finally found my Tuner.It's like having a shortwave radio, but it's better! The reception is very clear, unlike the days when you had to look for bandwidth in the hope of getting a strong signal, or had to listen at certain times of the day or night to get reception. The app is set up to let you choose by genre, city or country, or genre within a country. And best of all, it's free! Stay tuned for hours to find a new station. It really is a small world after all. Local radio stations for me rarely satisfy what I want to listen to. Luckily I remember stations from other areas I visited that I enjoyed listening to while I was there. Now, thanks to MyTuner, I can listen to those stations whenever I want! Classic Country Station is very difficult to find locally, with myTuner, I can listen to The Legend. WSM in Nashville, anytime I want! Same with some syndicated talk shows. The local station may not bring it, but now I can still listen whenever I want! And, best of all, I've found this app works really well. Thank you amazing and free apps!! I love the feature where I can see what songs the station recently played. Adding a new station from the internet is very easy! Finding a new station is very easy with the associated station features. Some User Interface issues need to be addressed. 1. This app requires a way to manage your favorite radio stations. If you have more than, say, 15 favorites then scrolling through them can be a problem. 2. Let me group stations into folders, for example. 80's, EDM, Smooth Jazz, Local Station. 3. Let me edit icons for any station, and station titles as well. 4. Let me sort the list by name, style, location, date added, etc. Let me see my station as a list, a list with large icons, or as an icon only. As a programmer, I know these changes are almost trivial but will push your application to the next level.
